

Installing Remark Products in Windows 8.0

Article Number: 1 | Rating: Unrated | Last Updated: Wed, Aug 6, 2014 at 7:03 AM

The Remark software will run on Windows 8.0. However, if you are running version 8.0, the .NET Framework version 3.5 is required and is not typically enabled with early versions of Windows 8. Note that this problem does not exist in Windows 8.1 and later. Before installing your Remark software (or you receive an error running Remark after installing), please enable the .NET 3.5 framework in the Windows Control Panel.

Right click the desktop. Click "All Applications." Click "Control Panel." Click "Programs." Click "Turn Windows Features on and Off." Click the box for ".NET Framework 3.5." Click "OK." Windows 8 installs the .NET framework 3.5.

When prompted, select "Download Files from Windows Update." The installation continues. Once completed, reboot the computer and then run the Remark installation program.

This article pertains to the following minimum versions of Remark (and later):

Remark Office OMR 8.4

Remark Classic OMR 4.3

Remark Web Survey 5.2

Remark Test Grading Edition 1.1

You should ensure you have the latest version of the product before trying to install it on Windows 8. For more information you can watch this video tutorial:
