

Error #1935 Installing Software

Article Number: 191 | Rating: Unrated | Last Updated: Fri, Aug 29, 2014 at 10:11 AM

The 1935 Error message is generated by the Windows Installer when it is unable to access a specific file, folder, or area of the system's registry for some reason. Normally, this error is generated if you not have full administrative rights to the entire computer (including all files, folders, and areas of the Windows Registry) or if a virus scanner is interfering with the install. Please follow the steps provided below:

Reboot your computer. Log in using an ID with administrative rights to the local machine. Disable the virus scanner software. Run the install file as an administrator by right clicking on the install file and selecting "Run as Administrator." If the installation is still not successful, please contact [Remark Support](#).
